Biological Data

Biological description

Non-selective calcium ionophore which facilitates transport of Ca^{2+} across the plasma membrane.

Increases intracellular Ca^{2+} concentration to induce Ca^{2+}-dependent cell death. Also increases Zn^{2+} and Fe^{2+} permeability across the cell membrane.

Induces ROS and oxidative platelet particle formation.

Also activates IKK2 and NF-κB in mast cells, induces cytokine production and degranulation.

Additionally shown to induce apoptosis and autophagy.

Solubility & Handling

Storage instructions	+4°C (desiccate)
Solubility overview	Soluble in DMSO (50mM) and in ethanol (10mM, gentle warming)
Important	This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.
