DATASHEET

Rapamycin

Product overview

Name	Rapamycin
Cat No	HB2779
Alternative names	Sirolimus
Antibiotic Spectrum	yeast and fungi
Purity	>98%
Description	mTOR inhibitor and potent immunosuppressant. Also used in inducible gene editing methods (e.g. CRISPR/Cas9) and promotes hPSC differentiation.

Biological Data

Biological description

Overview

Rapamycin is an mTOR inhibitor and potent immunosuppressant. It complexes with FKBP12 to bind mTORC1 to inhibit mTOR activity and block subsequent activation of p70 s6 kinase ($IC_{50} = 50 \text{ pM}$).

Active in vivo.

Uses and applications

Rapamycin shows a variety of biological actions. E.g it induces autophagy and apoptosis.

Promotes hPSC differentiation to blood progenitor and mesendoderm cells.

It can also be used in inducible CRISPR/Cas9 systems to enable inducible gene editing.

Used as a chemical dimerizer in Chemically-inducible dimerization (CID).

As mTOR is a central inflammation regulator, rapamycin has recently been investigated as part of cytokine storm / COVID-19 related research.

Solubility & Handling

Storage instructions Solubility overview Important

-20 °C

Soluble in ethanol (20 mM) and DMSO (50 mM)

This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.
