## DATASHEET

### Rapamycin

## Product overview

Name	Rapamycin
Cat No	HB2779
Alternative names	Sirolimus
Antibiotic Spectrum	yeast and fungi
Purity	>98%
Description	mTOR inhibitor and potent immunosuppressant. Also used in inducible gene editing methods (e.g. CRISPR/Cas9) and promotes hPSC differentiation.

## Biological Data

### Biological description

#### Overview

Rapamycin is an mTOR inhibitor and potent immunosuppressant. It complexes with FKBP12 to bind mTORC1 to inhibit mTOR activity and block subsequent activation of p70 s6 kinase ( $IC_{50} = 50 \text{ pM}$ ).

Active in vivo.

#### Uses and applications

Rapamycin shows a variety of biological actions. E.g it induces autophagy and apoptosis.

Promotes hPSC differentiation to blood progenitor and mesendoderm cells.

It can also be used in inducible CRISPR/Cas9 systems to enable inducible gene editing.

Used as a chemical dimerizer in Chemically-inducible dimerization (CID).

As mTOR is a central inflammation regulator, rapamycin has recently been investigated as part of cytokine storm / COVID-19 related research.

## Solubility & Handling

### Storage instructions

-20 °C

### Solubility overview

Soluble in ethanol (20 mM) and DMSO (50 mM)

### Important

This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.

## Chemical Data

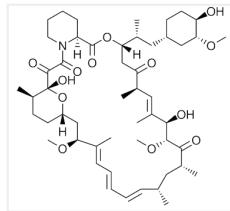

### Chemical name
