DATASHEET

(S)-AMPA

Product overview

Name (S)-AMPA
Cat No HB0052
Biological action Agonist
Purity >99%

Description AMPA receptor agonist

Images

Biological Data

Biological description

(S)-AMPA is an AMPA receptor agonist and the active enantiomer of AMPA. It is a neurotoxin in the immature rat brain.

(R,S)-AMPA is also available.

Application notes

The AMPA receptor agonist (S)-AMPA is typically used at concentrations of 1-100 μ M. At 10 μ M, (S)-AMPA from Hello Bio induces a large depolarising current. This depolarising current was occluded in the presence of the AMPA receptor antagonist NBQX (20 μ M). (See Fig 1 above).

#Protocol 1: (S)-AMPA protocol

- Whole cell voltage clamp recordings of CA1 pyramidal neurons from the rat hippocampal brain slice.
- Neurons were held at -60 mV and continuously perfused with aCSF in the presence of the GABA receptor antagonist gabazine (20μM).
- AMPA currents were evoked via applying (S)-AMPA directly to the recording chamber during continuous perfusion.
- To test the selectivity of (S)-AMPA to AMPA receptors, the experiment was repeated within the same neuron in the presence of the AMPA receptor antagonist NBQX (20 μM)
- Under these conditions (S)-AMPA failed to induce a depolarising current.

Solubility & Handling

Solubility overview Soluble in water (100mM)
Storage instructions Room temperature

Storage of solutions Prepare and use solutions on the same day if possible. Store solutions at -20 °C for up to one month if

storage is required. Equilibrate to RT and ensure the solution is precipitate free before use.

Shipping Conditions Stable for ambient temperature shipping. Follow storage instructions on receipt.

Important This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not

for human or veterinary use.

Chemical Data

Chemical name (S)-α-Amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid

Molecular Weight 186.17

Chemical structure HO₂C

HO₂C H₂N···O H

SMILES CC1=C(C(=O)NO1)C[C@@H](C(=O)O)N

Source Synthetic

InChi InChi=1S/C7H10N2O4/c1-3-4(6(10)9-13-3)2-5(8)7(11)12/h5H,2,8H2,1H3,(H,9,10)(H,11,12)/t5-/m0/s

1

InChiKey UUDAMDVQRQNNHZ-YFKPBYRVSA-N

MDL number MFCD00672630 Appearance White solid
