DATASHEET

Bradykinin

Product overview

Name	Bradykinin
Cat No	HB3101
Alternative names	BK
Purity	>95%
Description	Endogenous bradykinin receptor agonist

Biological Data

Biological description

Bradykinin is an endogenous bradykinin receptor agonist with selectivity for B_2 over B_1 receptors.

Bradykinin interacts with its GPCRs (G-protein-coupled receptors) to induce changes in intracellular calcium via a variety of mechanisms (PLC, prostaglandins, protein kinases and PLA_2). Addition of bradykinin to NG 108-15 neural cells causes a transient hyperpolarization followed by prolonged cell depolarization.

Recently Bradykinin has also been shown to neuron-generating division of neural progenitor cells through ERK activation

The peptide is involved in a variety of physiological and pathopysiological activities. It is a pro-inflammatory mediator and a potent vasodilator which exerts its vasodilatory actions by inducing endothelial release of NO (nitric oxide), prostacyclin and EDHF.

It is involved in cardiovascular homeostasis, inflammation and nociception. It also shows anti-proliferative and anti – fibrogenic effects.

Solubility & Handling

Storage instructions	-20°C
Solubility overview	Soluble in water (1 mg/ml)
Important	This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.

Chemical Data

Chemical name	RPPGFSPFR
Molecular Weight	1060.22
Chemical structure	Molecular Formula	$C_{50}H_{73}N_{15}O_{11}$
CAS Number	58-82-2
PubChem identifier	439201
SMILES	C1C[C@H](N(C1)C(=O)[C@@H]2CCCN2C(=O)[C@H](CCCN=C(N)N)N)C(=O)NCC(=O)N[C@@H](CC3=CC=CC=C3)C(=O)N[C@@H](CO)C(=O)N4CCC[C@H]4C(=O)N[C@@H](CC5=CC=CC=C5)C(=O)N[C@@H](CCCN=C(N)N)C(=O)O

InChiKey	QXZGBUJJYSLZLT-FDISYFBBSA-N
Appearance	Lyophilized powder
