DATASHEET

X-Gal

Product overview

Name	X-Gal
Cat No	HB4128
Alternative names	Bromochloroindoxyl galactoside
Biological action	Substrate
Purity	>99%
Description	Detects presence and activity of β -galactosidase. Widely used in cloning applications.

Biological Data

Biological description

Overview

X-Gal is a cell permeable, chromogenic substrate for β -galactosidase. It consists of galactose linked to a substituted indole.

β -galactosidase hydrolyzes X-gal to release an insoluble, bright blue precipitate.

Uses

X-Gal is frequently used in molecular biology cloning applications to detect the activity of β -galactosidase.

It is often used with IPTG in blue/white screening for bacterial colony selection in which X-Gal provides a visual indication of the cellular expression of β -galactosidase.

Solubility & Handling

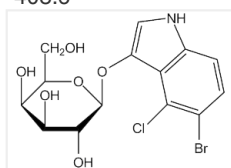

Storage instructions Solubility overview Important

+4 °C
Soluble in DMSO (30 mg/ml)
This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.
