DATASHEET

DMSO (Sterile-filtered)

Product overview

Name	DMSO (Sterile-filtered)
Cat No	HB3262
Alternative names	Methyl sulfoxide, Dimethyl Sulfoxide
Purity	>99.9%
Description	Widely used solvent. Improves direct differentiation of pluripotent stem cells and used as a stem cell cryoprotectant

Biological Data

Biological description	Organic solvent widely used for dissolving lipophilic substances. Commonly used as a cryototectant in cryopreservation of stem cells. DMSO activates the retinoblastoma (Rb) protein and increases the proportion of cells in the early G1 phase of the cell cycle. DMSO improves directed differentiation of many cell lines. DMSO increases the competency of pluripotent stem cells (in >25 different embryonic and induced pluripotent stem cell lines) to respond to differentiation signals, enhance differentation across all germ layers and improve terminal differentiation into functional derivatives Endotoxin < 0.05 I.E(EU)/mL

Solubility & Handling

Storage instructions	Room temperature (desiccate)
Handling	This compound is light sensitive. We therefore recommend protecting the compound and solutions from light.
Important	This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use.

Chemical Data

Chemical name	Dimethyl sulfoxide
Molecular Weight	78.13
Chemical structure	Molecular Formula	C_2H_6OS
CAS Number	67-68-5
PubChem identifier	679

SMILES	CS(=O)C
InChi	InChI=1S/C2H6OS/c1-4(2)3/h1-2H3
InChiKey	IAZDPXIOMUYVGZ-UHFFFAOYSA-N
MDL number	MFCD00002089
Appearance	colourless liquid
