DATASHEET

Annexin V-FITC Apoptosis Staining / Detection Kit

Product overview

Name Cat No Biological description Annexin V-FITC Apoptosis Staining / Detection Kit

HB9623

Identifies early apoptotic, necrotic and viable cells. One-step staining procedure which detects apoptosis by staining exposed phosphatidylserine (PS) which have translocated to the external cell surface. This allows detection of membrane changes that occur in early apoptotic cells. The kit is able

to differentiate between:

- Apoptotic cells: Stained by Annexin V-FITC but not propidium iodide
- Necrotic cells: Stained by both Annexin V-FITC and propidium iodide
- Live cells: Stained by neither Annexin V-FITC and propidium iodide

This kit contains:

- Annexin V-FITC Staining solution
- Propidium Iodide Staining solution
- 10x binding buffer

Biological action Applications Description

Kit

Cell Culture, FACS and flow cytometry, fluorescence imaging, live cell imaging

Identifies early apoptotic, necrotic and viable cells

Biological Data

Application notes

Please follow this link to a full Annexin V-FITC staining protocol.

Solubility & Handling

Storage instructions

Important

+4°C

This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not

for human or veterinary use.

Chemical Data

Excitation 491 nm **Emission** 516 nm
