DCFDA / H2DCFDA - Cellular ROS Assay Kit

### **Product overview**

Name Cat No Biological description DCFDA / H2DCFDA - Cellular ROS Assay Kit HR7375

DCFDA / H<sub>2</sub>DCFDA is a cell permeable fluorescent probe that is redox sensitive and used to measure the concentration of reactive oxygen species (ROS) within a population of cells. DCFDA / H<sub>2</sub>DCFDA diffuses into cells where it is hydrolysed by intracellular esterases into a non-fluorescent and non-cell permeable intermediate. Upon reaction with ROS this forms the fluorescent compound 2',7' –dichlorofluorescein (DCF) which is excited at 485nm and emits at 535nm. Pyocyanin is included within this kit as a positive control. Pyocyanin promotes the formation of ROS through inactivation of catalase and depleting reduced glutathione.

This kit contains:

- DCFDA / H<sub>2</sub>DCFDA assay reagent
- DMSO
- Lyophilised Pyocyanin
- 10x assay buffer

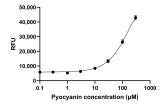

Applications

Description

Cell Culture, FACS and flow cytometry, ICC

Kit for measurement of reactive oxygen species (ROS) within cells.

## **Solubility & Handling**

Storage instructions -20°C

Storage of solutions Prepare and use solutions on the same day if possible. Store solutions at -20 °C for up to one month if

storage is required. Equilibrate to RT and ensure the solution is precipitate free before use.

Storage instructions -20°C

**Shipping Conditions Important** 

Stable for ambient temperature shipping. Follow storage instructions on receipt.

This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not

for human or veterinary use
