

DATASHEET

aCSF Instant Powder (Mg²⁺/Ca²⁺ free) (packets)

Product overview

Name	aCSF Instant Powder (Mg ²⁺ /Ca ²⁺ free) (packets)
Cat No	HB16218
Biological description	Artificial cerebrospinal fluid (aCSF) is a widely used buffer in electrophysiological experiments to sustain <i>ex-vivo</i> brain sections. This kit contains 20 instant powder packets. Simply add each packet to 1L of dH ₂ O, mix, add the desired concentration of Mg ²⁺ and Ca ²⁺ and bubble with carbogen to make 1L of aCSF at physiological pH. Please note: This formulation does not contain any Mg ²⁺ or Ca ²⁺ so that this can be specified by the experimenter.

Key features:

- Save time by using preformulated individual aCSF powder packets - each packet dissolves in seconds
- More reproducible with each pack's highly accurate formulation - less error for better data.
- Extensively validated in a range of patch clamp electrophysiology experiments.
- Does not contain Mg²⁺ or Ca²⁺ to allow manipulation by the experimenter. For complete aCSF containing Mg²⁺ and Ca²⁺ please see [HB9200 aCSF Instant Powder \(packets\)](#)

Biological action Description

Contains (in mM): NaCl 124. Glucose 10, NaHCO₃ 24, KCl 3, NaH₂PO₄ 1.25

Buffer

Preformulated instant powder packets to make artificial cerebrospinal fluid (aCSF) without Mg²⁺ or Ca²⁺

Images

Solubility & Handling

Storage instructions Handling

RT. Add each packet to 1L dH₂O.

Add the contents of each packet to 1000ml of deionised water, mix well, add desired Mg²⁺ and Ca²⁺ and bubble with carbogen (10-15 minutes) to make 1L of aCSF at physiological pH. Warm to 37°C before use.

Important

Use immediately once opened.

This product is for RESEARCH USE ONLY and is not intended for therapeutic or diagnostic use. Not for human or veterinary use

Chemical Data

Kit contents	Preformulated packets. Each makes 1L of aCSF.
pH after carbogenation	7.2
pH before carbogenation	7.5
