## DATASHEET

JC-10

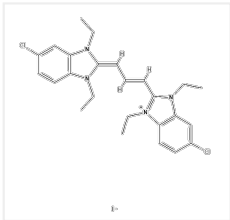

### Product overview

<b>Name</b>	JC-10
<b>Cat No</b>	HB19967
<b>Biological description</b>	JC-10 is a highly soluble fluorescent probe ideal for assessing mitochondrial membrane potential. In healthy cells with polarized mitochondria, JC-10 aggregates, emitting a strong orange fluorescence (Ex/Em: 540nm/590nm). However, in cells with depolarized mitochondria, a hallmark of apoptosis and other cellular stresses, JC-10 reverts to its monomeric form, resulting in a shift to green fluorescence (Ex/Em: 490nm/525nm). This reversible, ratiometric change in fluorescence emission provides a reliable indicator of mitochondrial health. JC-10's superior aqueous solubility to JC-1 makes it a convenient and robust tool for various applications, including fluorescence microscopy, flow cytometry, and high-throughput screening.
<b>Biological action</b>	Dyes & stains
<b>Applications</b>	fluorescence imaging, live cell imaging
<b>Purity</b>	>98%
<b>Description</b>	Fluorescent mitochondrial membrane potential dye

### Solubility & Handling

<b>Storage instructions</b>	-20 °C
<b>Solubility overview</b>	Soluble in DMSO (5mg/ml) and H <sub>2</sub> O (1µM)
<b>Handling</b>	JC-10 is light sensitive; exposure to light may affect compound performance. We therefore recommend storing the solid material and any solutions in the dark and protecting from light.
